# Trapp Steel Doors

## Trapp Steel Edge Doors Provide Outstanding Security

### The 24 Gauge Steel Edge Advantage

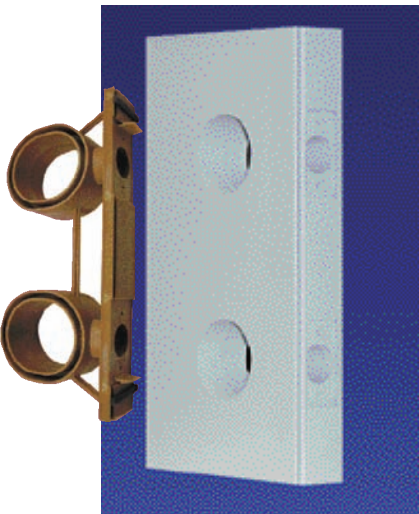

All Trapp Smooth Steel Doors feature a 24 gauge steel-edge construction – there are no wood edges that can split when force is applied. This gives you the best security rating in the industry. Woodgrain steel doors have 22 gauge steel skins for added strength, durability and security.

A wood edge steel door splits after one hit of a 100lb. test weight.

Steel edge doors can sustain up to 7 hits of a 100lb. test weight, giving you the best security rating in the industry.

### Composite Lock Block

Full 4" x 10" composite lock block has more screw-holding power than wood. It is injection-molded for uniform size and makes installation of locksets easy.

### Unsurpassed Warranty

All Trapp Steel Doors carry a limited lifetime warranty. See your dealer for full details. Decorative glass is warranted for 10 years.

### Door Bottom Seal

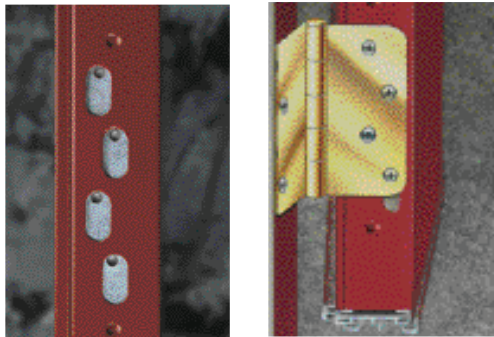

The door bottom weather-strip slides off and on for easy replacement and forms a weather-tight seal to the threshold.

## Patented Adjustable Hinge Plate System

All Trapp Steel Doors have a patented Adjustable Hinge Plate System that is unmatched in the industry. The Adjustable Hinge Plate – located inside the door at each hinge – allows for adjustment up or down, in or out. This is important because improper door alignment can cause the weather-strip seal to break, allowing outside air to enter or heat to escape.

You get a tight fit from top to bottom without removing the door from its hinges. The adjustment can be made at installation or at anytime afterwards. All that's needed is a screwdriver!

### Trapp Door's Patented Adjustable Hinge Plate System . . .

Trapp Door's exclusive hinge plate adjusts up or down and in or out for a tight weather-seal

# Trapp Fiberglass Woodgrain

## TRAPP WOODGRAIN FIBERGLASS ENTRY DOORS

*Inspired by the look & texture of natural wood*

**Won't dent, crack, rot, split or warp ...** Our unique water-resistant seal protects our doors against water infiltration on all sides to prevent warping, delamination, corrosion, rotting and the buildup of mold and mildew.

**Fiberglass Reinforced Door Skins ...** Our high-impact compression molded skins will not splinter, dent, warp, rot or rust. Surfaces are easy to stain or paint, and easy to clean. Our deep-profile fiberglass skins create stronger dimensions and crisper shadow lines. Architecturally correct stile and rail proportions enhance the door's traditional oak appearance.

**Full-length Composite Stiles ...** Our full-length composite stiles provide complete waterproofing for the door's insulation. Composite stiles have two times the screw-holding capabilities of traditional wood-edged doors and will never splinter like wood.

**Composite Top & Bottom Rails ...** High-strength engineered composite top and bottom rails prevent moisture from seeping into the door. Bottom rails will also accommodate a range of door sweeps.

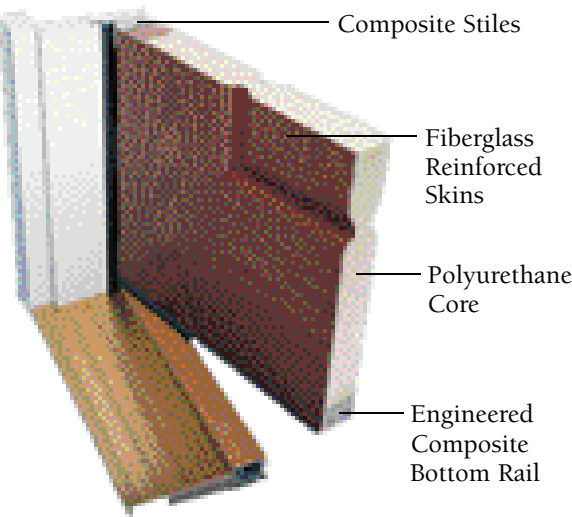

**Environmentally Sound Polyurethane Foam Core ...** We are proud to offer a door which is completely CFC-free in compliance with U.S. environmental standards to prevent destruction to the Earth's ozone layer. The advanced polyurethane core provides insulation properties six times greater than wood doors.

NFRC - U Value = 0.16

## The Beauty of Wood, the Strength of Fiberglass

### Water Tight Trapp Fiberglass Entry Doors

Features a water-resistant seal that protects the door against water infiltration on all sides to prevent warping, delamination, rotting, corrosion, and the buildup of mold and mildew. Compared with wood edges that can absorb moisture, our full-length composite edges actually prevent moisture from seeping into the fiberglass door.

# Windsor

The shimmering polished bevels sparkle in a clear and gray soft wave glass background accented with brass caming. A graceful style that will complement any home.
